REC_DS using C_Week 7_COD_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

Input Format

The first line contains two integers, n and table_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

Output Format

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: 5 10
    21 31 41 51 61
    3
    31 60 51
    Output: Value 31: Found
    Value 60: Not Found
    Value 51: Found
    Answer
   #include <stdio.h>
    #define MAX 100
    #define EMPTY -1 // Use -1 to indicate an empty cell
    // Initialize the hash table
    void initializeTable(int table[], int size) {
      for (int i = 0; i < size; i++) {
        table[i] = EMPTY;
      }
    }
    // Perform linear probing to find an empty slot
int linearProbe(int table[], int size, int num) {
```

```
int index = num % size;
int start = index;
   while (table[index] != EMPTY) {
     index = (index + 1) \% size;
     if (index == start) {
        return -1; // Table full
   }
   return index;
}
// Insert roll numbers into the hash table
void insertIntoHashTable(int table[], int size, int arr[], int n) {
 for (int i = 0; i < n; i++) {
     int pos = linearProbe(table, size, arr[i]);
     if (pos != -1) {
        table[pos] = arr[i];
  }
}
// Search for a roll number in the hash table
int searchInHashTable(int table[], int size, int num) {
   int index = num % size;
   int start = index;
  while (table[index] != EMPTY) {
     if (table[index] == num) {
        return 1; // Found
     index = (index + 1) \% size;
     if (index == start) {
        break;
     }
   return 0; // Not found
// Main function to read input and handle queries
int main() {
   int n, table_size;
```

```
